Cost calculation examples

Let's say you have a company with 1000 devices. To detect required and/or available updates, you install an XEOX agent on 800 of these devices and add the other devices manually. After the 30 day trial period, you pay \$800 for the devices on which you installed an agent. You can also pay annually, in which case you pay \$8000, compared to \$9600 with the monthly plan.

Another company has 5000 devices, 3800 of which have Agent. The rest of the devices are manually added to the CMDB. This company is now paying \$3800 per month for the devices that are up and running with XEOX Agent. If you choose the annual plan, XEOX will give you 2 months for free, which means 38000\$, instead of 45600\$ if you choose the monthly plan and keep paying for one year.

A company has 150 devices in use and agents are installed on all 150 devices. The company is now paying \$150 per month or \$1500 per year as XEOX provides 2 months for free on an annual plan.
